For quarterly period ending: *November 30, 2013*

The objective of the proposed project is to develop a technology related to anomaly detection and characterization. During this quarter, a kick off meeting was held to review the project scope and milestones for the first quarter and the entire project. ApplusRTD commenced soliciting the required samples from the cofounders of this project. An initial test on available samples was performed with the standard set up of the equipment.
