Ms. Rebecca Roberts
President
Chevron Pipe Line Company
4800 Fournace Place
Bellaire, TX 77401

Re: CPF No. 5-2010-5032H

Dear Ms. Roberts:

Enclosed please find the Corrective Action Order issued by the Associate Administrator for Pipeline Safety in the above-referenced case. It requires Chevron Pipe Line Company to take immediate corrective action with respect to a 10-inch-diameter hazardous liquid pipeline that experienced a failure in Salt Lake City, Utah, on December 1, 2010. This Corrective Action Order is being served by facsimile and certified mail under 49 C.F.R. § 190.5, and its terms and conditions are effective upon receipt.

Thank you for your cooperation in this matter.

Sincerely,

Jeffrey D. Wiese
Associate Administrator
for Pipeline Safety

Enclosures: Corrective Action Order and Copy of 49 C.F.R. § 190.233

cc: Mr. Chris Hoidal, Director, Western Region, PHMSA

**U.S. DEPARTMENT OF TRANSPORTATION

Respondent.)	
)	

CORRECTIVE ACTION ORDER

On December 1, 2010, the National Response Center (NRC) received a report from the Chevron Pipe Line Company (Chevron or Respondent) that a failure had occurred on its 10-inch-diameter hazardous liquid pipeline in Salt Lake City, Utah. The initial report, submitted at 11:54 a.m. Mountain Standard Time (MST), indicated that 100 barrels of crude oil had been released in the vicinity of Milepost (MP) 174.5, a high consequence area (HCA) that experienced an 800-barrel release of crude oil from that same pipeline on June 11, 2010.

On December 2, 2010, the Pipeline and Hazardous Materials Safety Administration (PHMSA), Office of Pipeline Safety (OPS), Western Region initiated an investigation of the accident. To date, that investigation has included a review of the records for the failed pipeline, a physical inspection of the failure site, and interviews with Chevron's employees. The information available at this time indicates that other areas of this pipeline could experience a similar event if immediate corrective actions are not taken.

Accordingly, I find that Chevron's 10-inch-diameter pipeline is hazardous to life, property, or the environment, and that the issuance of a Corrective Action Order (CAO) is warranted under 49 U.S.C. § 60112 and 49 C.F.R. § 190.233. I further find that a failure to issue a CAO expeditiously would result in likely serious harm to life, property, and the environment; therefore, I am waiving the requirement for prior notice and an opportunity for a hearing.

Preliminary Findings

- Chevron is the operator a 182.5-mile hazardous liquid pipeline system that transports crude oil from a terminal in Rangely, Colorado, to a refinery in Salt Lake City, Utah (Salt Lake City Refinery).

- There are two 10-inch-diameter pipelines in Chevron's Rangely to Salt Lake City system: the Number 1 Line, an inactive line built in 1948, and the Number 2 Line, an active line built in 1952.

- The Number 2 Line receives crude oil in Rangely from a hazardous liquid gathering line system and at three other downstream injection points.
- The Number 2 Line has an elevation profile that ranges from 4,234 feet at the Salt Lake City Refinery to 8,450 feet at Wolf Creek Pass.
- The right-of-way (ROW) for the Number 2 Line includes several HCAs, particularly in the 50 mile segment that runs from Park City, Utah, to Salt Lake City, Utah.
- The Number 2 Line has 9 mainline block valves from the Hanna Pump Station (MP 108.5) to the Salt Lake City Refinery (MP 182.15).
- The Number 2 Line crosses Red Butte Creek at MP 174.5 on property that is owned by the University of Utah. Several public buildings, including an arboretum, auditorium, and dormitories, are located in the immediate area.
- On June 11, 2010, a failure occurred on the Number 2 Line near MP 174.5, resulting in the release of 800 barrels of crude oil. Chevron did not detect or respond to that failure for more than 10 hours.
- On June 17, 2010, Chevron installed a segment of 10-inch pipe in the Number 2 Line in a vault near MP 174.5 and Red Butte Road (Red Butte Vault). As a result of that installation, the portion of the Number 2 in the Red Butte Vault contained two valves: a 10-inch mainline block valve and a 6-inch valve (Affected Valve).
- On June 20, 2010, Chevron performed a 4-hour hydrostatic pressure test on the Number 2 Line from the Little Mountain Block Valve and Pressure Relief Station (MP 168.4) to the Salt Lake City Refinery (MP 182.5). As part of that pressure test, Chevron injected water mixed with a tracer dye into the Affected Valve.
- The manufacturer's specifications for the Affected Valve state that all fluids should be removed from the valve body after the performance of a hydrostatic pressure test, and that anti-freeze should be injected to ensure that any water in the valve does not adversely affect its operation during the winter months.
- The temperature in Salt Lake City, Utah, remained at or well below freezing from November 24, 2010, through December 1, 2010.
- On the morning of December 1, 2010, Chevron shutdown the Number 2 Line to perform routine maintenance activities. Operations resumed later that afternoon.
- At approximately 8:40 p.m. MST on December 1, 2010, Chevron shutdown the Number 2 Line after personnel in the pipeline control room observed abnormal pressure readings. Operations have not resumed since that time.
- At approximately 11:15 p.m. MST on December 1, 2010, Chevron response personnel arrived at the Red Butte Vault and discovered that the Affected Valve had failed,

resulting in the release of an estimated 100 barrels of crude oil. By that time, crude oil had overflowed the Red Butte Vault and migrated downhill in the direction of Red Butte Creek.

- On December 4, 2010, Chevron removed the Affected Valve and found as-yet-unidentified fluid in one of its components. That fluid has been preserved and sent to a laboratory for further analysis and examination. Initial observations by PHMSA's investigators and Chevron personnel indicated that the body of the Affected Valve had been split at the bonnet joint.
- Chevron has increased its original estimate of the crude oil released as a result of the December 1, 2010 failure from 100 to 500 barrels.

Determination of Necessity for Corrective Action Order and Right to Hearing

The bases for determining whether a pipeline facility requires corrective action are specified in 49 U.S.C. § 60112 and 49 C.F.R. § 190.233. Specifically, the Associate Administrator may issue a CAO after reasonable notice and the opportunity for a hearing, if he finds that a particular pipeline facility is or would be hazardous to life, property, or the environment. The terms of that CAO may include the suspended or restricted use of a pipeline facility, physical inspection, testing, repair, replacement, or any other action as appropriate. The Associate Administrator may also issue a CAO without notice and the opportunity for a hearing, if he finds that a failure to do so expeditiously will result in likely serious harm to life, property or the environment. In such cases, the opportunity for a hearing will be provided as soon as practicable after the issuance of the CAO.

Having reviewed the preliminary findings, I find that the continued operation of the Number 2 Line without corrective measures would be hazardous to life, property and the environment. The Number 2 Line has experienced two failures in the vicinity of MP 174.5 in the past 6 months: an 800-barrel release of crude oil in June 2010 and a 500-barrel release of crude oil in December 2010. The preliminary findings indicate that the failure to remove all of the test fluid (water) used during the June 2010 hydrostatic pressure test or to take appropriate action to ensure that any remaining water would not adversely affect the operation of the Number 2 Line may have caused or contributed to the December 2010 failure.

Significant portions of the Number 2 Line are also located in HCAs. That includes MP 174.5, the area that experienced the June 2010 and December 2010 failures and which contains several public buildings and a waterway. Furthermore, Chevron did not identify the location of the current release for more than two hours, despite the fact that the Red Butte Vault is approximately 8 miles from the Salt Lake City refinery and a prior failure had occurred in that area six months earlier. The hazardous nature and volume of the product transported, the possibility of similar conditions existing on other areas of the pipeline, including those located in HCAs, and the ongoing status of the investigation support such a finding as well.

I further find that a failure to issue a CAO expeditiously would result in likely serious harm to life, property, and the environment. That finding is supported by the elevation profile of the pipeline and topography of the surrounding areas; the operating conditions of the Number 2

Line; the existence of other components that could be adversely affected by Chevron's failure to perform the required maintenance after the June 2010 hydrostatic pressure test; its inability to promptly detect and respond to the June 11, 2010 and December 1, 2010 failures; and the ongoing status of the investigation into those failures. Accordingly, this CAO is issued without prior notice and opportunity for a hearing, and its terms and conditions are effective upon receipt.

Within 10 days of receiving this Order, Respondent may request a hearing by notifying the Associate Administrator for Pipeline Safety in writing, delivered personally, by mail or by telecopy at (202) 366-4566. The hearing will be held as soon as practicable, on a date that is mutually convenient to PHMSA and Respondent, in Denver, CO, or Washington, DC.

After receiving and analyzing additional data in the course of this investigation, PHMSA may identify other corrective measures that need to be taken. Respondent will be notified of any additional measures required and amendment of this Order will be considered. To the extent consistent with public safety, Respondent will be afforded notice and an opportunity for a hearing prior to the imposition of any additional corrective measures.

Required Corrective Action

Pursuant to 49 U.S.C. § 60112, I hereby order Chevron to take the following corrective actions with respect to the Number 2 Line:

1. Before resuming any transportation of hazardous liquid through the Number 2 Line, submit a written restart plan to the Director, Western Region, PHMSA for his approval. That restart plan must include provisions for:
 - a. Ensuring that the June 2010 hydrostatic pressure test will not adversely affect the future operation of the Number 2 Line by removing all fluids from appropriate facilities, components, valves, or equipment.
 - b. Ensuring that all pipeline facilities, components, appurtenances, and equipment affected by the June 2010 hydrostatic pressure test are inspected and maintained in accordance with the written procedures required under 49 C.F.R. §§ 195.401-402 and any other applicable standards, including the manufacturer's specifications.
 - c. Taking any other actions that may be necessary to ensure that the Number 2 Line is not hazardous to life, property and the environment.
2. Upon submission and satisfactory implementation of a restart plan that meets the conditions in Item 1, the Director may approve the transportation of hazardous liquids in the Number 2 Line.
3. If the Number 2 Line is restarted, Chevron must continuously monitor all valve vaults that are located between the Hanna Pump Station (MP 108.5) and Salt Lake Refinery (MP 182.5) for the next 48 hours. Chevron must also perform daily patrols of the ROW for that portion of the Number Line 2, with a primary focus on observing the

conditions of any above-ground pipeline facilities, until the Director authorizes the discontinuance of such patrols. If any leaks are detected in performing these activities, the Number 2 Line must be immediately shutdown until repairs or other appropriate remedial actions can be implemented.

4. Complete a full metallurgical examination and failure analysis of the Affected Valve within 30 days. A protocol for performing that mechanical and metallurgical testing must be submitted to the Director for prior approval.
5. Provide appropriate external leak detection systems for all above-ground pipeline facilities on the Number 2 Line between the Hannah Pump Station (MP 108.5) and Salt Lake Refinery (MP 182.5) within 60 days. Such systems must be capable of detecting leaks at the earliest practicable moment and of transmitting all necessary data to appropriate Chevron personnel. If adequate leak detection systems are installed, the Director will discontinue the daily patrols required under Item 5.
6. Submit an integrity verification and remedial work plan to the Director for approval within 90 days. The plan must contain appropriate provisions for addressing all known or suspected factors in the June 11, 2010, and December 1, 2010 failures.
7. Upon approval by the Director, the integrity verification and remedial work plans become incorporated into this Order and must be revised as necessary to incorporate the results of actions undertaken pursuant to this Order and whenever necessary to incorporate new information obtained during the failure investigation and remedial activities. Submit any such plan revisions to the Director for prior approval. The Director may approve plan elements incrementally.
8. Implement the integrity verification and remedial work plan as it is approved by the Director, including any revisions to the plan.
9. Submit a written report to the Director within 120 days that provides an analysis of whether additional valves should be installed on the Number 2 Line to ensure that its operation is not a threat to the public, property, or the environment. Chevron must consult with PHMSA and appropriate state and local officials in performing that analysis and preparing its written report.
10. Based on the information in the written report provided in Item 9, the Director may require the installation of such additional valves as are necessary to ensure that the operation of the Number 2 Line is not a threat to the public, property, or the environment.
11. Submit quarterly reports to the Director that: (1) include all available data and results of the testing and evaluations required by this Order; and (2) describe the progress of the repairs or other remedial actions being undertaken. The first quarterly report for the period from December 1, 2010, through December 31, 2010, is due by January 31, 2011.
12. Maintain documentation of the costs associated with implementation of this Corrective Action Order. Include in each monthly report submitted, the to-date total costs

associated with: (1) preparation and revision of procedures, studies and analyses; (2) physical changes to pipeline infrastructure, including repairs, replacements and other modifications; and (3) environmental remediation, if applicable.

13. The Director may approve each submission required under this Order in whole or in part and with or without modifications or conditions. Respondent must take all action required by the submission as approved or modified by the Director. If the Director disapproves all or any portion of a submission, Respondent must correct all deficiencies within the time specified by the Regional Director, and resubmit it for approval.

The Director may grant an extension of time for compliance with any of the terms of this Corrective Action Order upon submission of a timely written request demonstrating good cause for the relief requested.

The actions required by this Corrective Action Order are in addition to, and do not waive, any requirements that apply to Respondent's pipeline system under the Pipeline Safety Laws and Regulations or any other provision of Federal or State law.

Respondent may appeal any decision of the Director to the Associate Administrator for Pipeline Safety. Decisions of the Associate Administrator shall be final.

In accordance with 49 U.S.C. § 60122 and 49 C.F.R. § 190.223, failure to comply with this Order may result in the administrative assessment of civil penalties and in referral to the Attorney General for appropriate relief in United States District Court pursuant to 49 U.S.C. § 60120.

The terms and conditions of this Corrective Action Order are effective upon service in accordance with 49 C.F.R. § 190.5.

Jeffrey D. Wiese
Associate Administrator
for Pipeline Safety

DEC 08 2010

Date Issued

§ 190.231

(c) Any person who willfully and knowingly injures or destroys, or attempts to injure or destroy, any interstate transmission facility, any interstate pipeline facility, or any intrastate pipeline facility used in interstate or foreign commerce or in any activity affecting interstate or foreign commerce (as those terms are defined in 49 U.S.C. 60101 *et seq.*) shall, upon conviction, be subject for each offense to a fine of not more than \$25,000, imprisonment for a term not to exceed 15 years, or both.

(d) Any person who willfully and knowingly defaces, damages, removes, destroys any pipeline sign, right-of-way marker, or marine buoy required by 49 U.S.C. 60101 *et seq.* or 49 U.S.C. 5101 *et seq.*, or any regulation or order issued thereunder shall, upon conviction, be subject for each offense to a fine of not more than \$5,000, imprisonment for a term not to exceed 1 year, or both.

(e) Any person who willfully and knowingly engages in excavation activity without first using an available one-call notification system to establish the location of underground facilities in the excavation area; or without considering location information or markings established by a pipeline facility operator; and

(1) Subsequently damages a pipeline facility resulting in death, serious bodily harm, or property damage exceeding \$50,000;

(2) Subsequently damages a pipeline facility and knows or has reason to know of the damage but fails to promptly report the damage to the operator and to the appropriate authorities; or

(3) Subsequently damages a hazardous liquid pipeline facility that results in the release of more than 50 barrels of product; shall, upon conviction, be subject for each offense to a fine of not more than \$5,000, imprisonment for a term not to exceed 5 years, or both.

(f) No person shall be subject to criminal penalties under paragraph (a) of this section for violation of any regulation and the violation of any order issued under § 190.217, § 190.219 or

49 CFR Ch. I (10–1–09 Edition)

§ 190.229 if both violations are based on the same act.

[45 FR 20413, Mar. 27, 1980, as amended by Amdt. 190-2, 54 FR 32344, Aug. 7, 1989; Amdt. 190-4, 56 FR 63770, Dec. 5, 1991; Amdt. 190-6, 61 FR 18515, Apr. 26, 1996; 70 FR 11138, Mar. 8, 2005]

§ 190.231 Referral for prosecution.

If an employee of the Pipeline and Hazardous Materials Safety Administration becomes aware of any actual or possible activity subject to criminal penalties under § 190.229, the employee reports it to the Office of the Chief Counsel, Pipeline and Hazardous Materials Safety Administration, U.S. Department of Transportation, Washington, DC 20590. The Chief Counsel refers the report to OPS for investigation. Upon completion of the investigation and if appropriate, the Chief Counsel refers the report to the Department of Justice for criminal prosecution of the offender.

[Amdt. 190-6, 61 FR 18515, Apr. 26, 1996, as amended at 70 FR 11137, Mar. 8, 2005]

SPECIFIC RELIEF

§ 190.233 Corrective action orders.

(a) Except as provided by paragraph (b) of this section, if the Associate Administrator, OPS finds, after reasonable notice and opportunity for hearing in accord with paragraph (c) of this section and § 190.211(a), a particular pipeline facility to be hazardous to life, property, or the environment, the Associate Administrator, OPS shall issue an order pursuant to this section requiring the owner or operator of the facility to take corrective action. Corrective action may include suspended or restricted use of the facility, physical inspection, testing, repair, replacement, or other appropriate action.

(b) The Associate Administrator, OPS may waive the requirement for notice and opportunity for hearing under paragraph (a) of this section before issuing an order pursuant to this section when the Associate Administrator, OPS determines that the failure to do so would result in the likelihood of serious harm to life, property, or the environment. However, the Associate Administrator, OPS shall provide an opportunity for a hearing as soon as is

practicable after the issuance of a compliance order. The provisions of paragraph (c)(2) of this section apply to an owner or operator's decision to exercise its opportunity for a hearing. The purpose of such a post-order hearing is for the Associate Administrator, OPS to determine whether a compliance order should remain in effect or be rescinded or suspended in accord with paragraph (g) of this section.

(c) Notice and hearing:

(1) Written notice that OPS intends to issue an order under this section shall be served upon the owner or operator of an alleged hazardous facility in accordance with §190.5. The notice shall allege the existence of a hazardous facility and state the facts and circumstances supporting the issuance of a corrective action order. The notice shall also provide the owner or operator with the opportunity for a hearing and shall identify a time and location where a hearing may be held.

(2) An owner or operator that elects to exercise its opportunity for a hearing under this section must notify the Associate Administrator, OPS of that election in writing within 10 days of service of the notice provided under paragraph (c)(1) of this section, or under paragraph (b) of this section when applicable. The absence of such written notification waives an owner or operator's opportunity for a hearing and allows the Associate Administrator, OPS to issue a corrective action order in accordance with paragraphs (d) through (h) of this section.

(3) A hearing under this section shall be presided over by an attorney from the Office of Chief Counsel, Pipeline and Hazardous Materials Safety Administration, acting as Presiding Official, and conducted without strict adherence to formal rules of evidence. The Presiding Official presents the allegations contained in the notice issued under this section. The owner or operator of the alleged hazardous facility may submit any relevant information or materials, call witnesses, and present arguments on the issue of whether or not a corrective action order should be issued.

(4) Within 48 hours after conclusion of a hearing under this section, the Presiding Official shall submit a rec-

ommendation to the Associate Administrator, OPS as to whether or not a corrective action order is required. Upon receipt of the recommendation, the Associate Administrator, OPS shall proceed in accordance with paragraphs (d) through (h) of this section. If the Associate Administrator, OPS finds the facility is or would be hazardous to life, property, or the environment, the Associate Administrator, OPS shall issue a corrective action order in accordance with this section. If the Associate Administrator, OPS does not find the facility is or would be hazardous to life, property, or the environment, the Associate Administrator shall withdraw the allegation of the existence of a hazardous facility contained in the notice, and promptly notify the owner or operator in writing by service as prescribed in §190.5.

(d) The Associate Administrator, OPS may find a pipeline facility to be hazardous under paragraph (a) of this section:

(1) If under the facts and circumstances the Associate Administrator, OPS determines the particular facility is hazardous to life, property, or the environment; or

(2) If the pipeline facility or a component thereof has been constructed or operated with any equipment, material, or technique which the Associate Administrator, OPS determines is hazardous to life, property, or the environment, unless the operator involved demonstrates to the satisfaction of the Associate Administrator, OPS that, under the particular facts and circumstances involved, such equipment, material, or technique is not hazardous.

(e) In making a determination under paragraph (d) of this section, the Associate Administrator, OPS shall consider, if relevant:

(1) The characteristics of the pipe and other equipment used in the pipeline facility involved, including its age, manufacturer, physical properties (including its resistance to corrosion and deterioration), and the method of its manufacture, construction or assembly;

(2) The nature of the materials transported by such facility (including their corrosive and deteriorative qualities),

§ 190.235

the sequence in which such materials are transported, and the pressure required for such transportation;

(3) The characteristics of the geographical areas in which the pipeline facility is located, in particular the climatic and geologic conditions (including soil characteristics) associated with such areas, and the population density and population and growth patterns of such areas;

(4) Any recommendation of the National Transportation Safety Board issued in connection with any investigation conducted by the Board; and

(5) Such other factors as the Associate Administrator, OPS may consider appropriate.

(f) A corrective action order shall contain the following information:

(1) A finding that the pipeline facility is hazardous to life, property, or the environment.

(2) The relevant facts which form the basis of that finding.

(3) The legal basis for the order.

(4) The nature and description of any particular corrective action required of the respondent.

(5) The date by which the required corrective action must be taken or completed and, where appropriate, the duration of the order.

(6) If the opportunity for a hearing was waived pursuant to paragraph (b) of this section, a statement that an opportunity for a hearing will be available at a particular time and location after issuance of the order.

(g) The Associate Administrator, OPS shall rescind or suspend a corrective action order whenever the Associate Administrator, OPS determines that the facility is no longer hazardous to life, property, or the environment. When appropriate, however, such a rescission or suspension may be accompanied by a notice of probable violation issued under § 190.207.

(h) At any time after a corrective action order issued under this section has become effective, the Associate Administrator, OPS may request the Attorney General to bring an action for appropriate relief in accordance with § 190.235.

(i) Upon petition by the Attorney General, the District Courts of the United States shall have jurisdiction to

49 CFR Ch. I (10–1–09 Edition)

enforce orders issued under this section by appropriate means.

[70 FR 11138, Mar. 8, 2005]

§ 190.235 Civil actions generally.

Whenever it appears to the Associate Administrator, OPS that a person has engaged, is engaged, or is about to engage in any act or practice constituting a violation of any provision of 49 U.S.C. 60101 *et seq.*, or any regulations issued thereunder, the Administrator, PHMSA, or the person to whom the authority has been delegated, may request the Attorney General to bring an action in the appropriate U.S. District Court for such relief as is necessary or appropriate, including mandatory or prohibitive injunctive relief, interim equitable relief, civil penalties, and punitive damages as provided under 49 U.S.C. 60120 and 49 U.S.C. 5123.

[70 FR 11139, Mar. 8, 2005]

§ 190.237 Amendment of plans or procedures.

(a) A Regional Director begins a proceeding to determine whether an operator's plans or procedures required under parts 192, 193, 195, and 199 of this subchapter are inadequate to assure safe operation of a pipeline facility by issuing a notice of amendment. The notice shall provide an opportunity for a hearing under § 190.211 of this part and shall specify the alleged inadequacies and the proposed action for revision of the plans or procedures. The notice shall allow the operator 30 days after receipt of the notice to submit written comments or request a hearing. After considering all material presented in writing or at the hearing, the Associate Administrator, OPS shall determine whether the plans or procedures are inadequate as alleged and order the required amendment if they are inadequate, or withdraw the notice if they are not. In determining the adequacy of an operator's plans or procedures, the Associate Administrator, OPS shall consider:

(1) Relevant available pipeline safety data;

(2) Whether the plans or procedures are appropriate for the particular type of pipeline transportation or facility, and for the location of the facility;
