NOTICE OF AMENDMENT

CERTIFIED MAIL - RETURN RECEIPT REQUESTED

February 24, 2011

Mr. Steve Rusch
Vice President
Plains Exploration & Production Company
5640 South Fairfax Avenue
Los Angeles, CA 92256

CPF 5-2011-7002M

Dear Mr. Rusch:

On October 13-15, 2010, a representative of the Pipeline and Hazardous Materials Safety Administration (PHMSA), pursuant to Chapter 601 of 49 United States Code, conducted an Integrity Management (IM) inspection contained in the Plains Exploration and Production (PXP) Integrity Management Program (IMP) at your offices in Los Angeles, California.

As a result of the inspection, it appears that you have committed probable violations, as noted below, of pipeline safety regulations, Title 49, Code of Federal Regulations, Part 195. The probable violations are as follows:

1. §195.452 Pipeline integrity management in high consequence areas.

(f) What are the elements of an integrity management program?

An integrity management program begins with the initial framework. An operator must continually change the program to reflect operating experience, conclusions drawn from results of the integrity assessments, and other maintenance and surveillance data, and evaluation of consequences of a failure on the high

consequence area. An operator must include, at minimum, each of the following elements in its written integrity management program:

(1) A process for identifying which pipeline segments could affect a high consequence area;

Plains Exploration & Production Company (PXP) has a 10,000 barrel breakout tank in its Gaviota Processing Plant which is located in a High Consequence Area (HCA). However, this breakout tank is not included in the IMP segment identification. PXP must include this breakout tank in its IMP and integrate all available information about the integrity of the tank and the consequence of its failure.

2. §195.452 Pipeline integrity management in high consequence areas.

(e) What are the risk factors for establishing an assessment schedule (for both the baseline and continual integrity assessments)?

(1) An operator must establish an integrity assessment schedule that prioritizes pipeline segments for assessment (see paragraphs (d)(1) and (j)(3) of this section). An operator must base the assessment schedule on all risk factors that reflect the risk conditions on the pipeline segment. The factors an operator must consider include, but are not limited to:

(vi) Existing or projected activities in the area;

Plains Exploration & Production Company (PXP) did not include the anchoring of boats over its offshore pipelines from Platforms Irene and Hermosa to shore as a risk factor in the IMP assessment. PXP must base the assessment schedule on all risk factors that reflect the risk conditions on its offshore pipeline segments and evaluate the likelihood of pipeline release occurring and how a release could affect the high consequence area.

This authorizes PHMSA to make findings and issue a compliance order;
