RE: Response to PHMSA Notice Of Amendment CPF 5-2023-013-NOA

Dear Mr. Hubbard,

During the week of September 12, 2022, representatives of the Pipeline and Hazardous Materials Safety Administration (PHMSA) performed an inspection of Menzies Aviation's procedures for PHMSA notification of operator qualification (OQ) program changes and damage prevention program for its Jet Fuel Crosstown Pipeline located in Anchorage, Alaska.

As a result of the inspection, PHMSA issued a Notice Of Amendment dated March 1, 2023, addressing an apparent inadequacy found within Menzies Aviation's procedures. Menzies Aviation does not contest the corrective measures and has been working diligently to resolve the finding.

Menzies Aviation is proud of our pipeline safety program and has committed significant resources to proactively managing our pipelines and facility assets. Menzies Aviation also understands that improvements and enhancements are integral to the success of our programs. Such PHMSA inspections provide a valuable opportunity for such improvements.

The purpose of this letter is to provide a formal response to the Notice Of Amendment. It is always our intent to comply with all PHMSA and other regulatory requirements, as well as to address any known deficiencies. Please find attached our response to the Notice of Amendment.

Please call me if you have any questions at 907-243-4322.

Regards,

Michael Farris
General Manager
