- ◆ **The 1996 workshop brought together three human and organizational factor disciplines:**
 - ***Engineering & ergonomics***
 - ***Process safety***
 - ***Behavioral science as applied to the life cycle of offshore operations***

WHAT WE LEARNED (CONT)

To apply human and organizational factor disciplines within an organization, engineers and corporate leaders need a high level of confidence that the approach(es) they choose will meet the anticipated objectives

of Energy (DOE)

WHAT WE LEARNED (CONT)

Practical application of time-proven science and technology, as related to each human and organizational factor discipline, supported by industry and regulatory consensus is needed for industry to embrace human factors as accepted practice as opposed to an add-on to existing safety programs

To work together to demystify human factors by documenting practical solutions to reduce incidents and improve safety, quality and reliability in the lifecycle of offshore facilities

WORKSHOP OBJECTIVES

- ◆ Establish human factors awareness
- ◆ Identify human factors tools that can be used or developed to prevent incidents
- ◆ Integrate human factors principles into offshore design by assessing available guidance and identifying gaps and barriers
